## 1 Exercise 001

#### 1.1 Problem

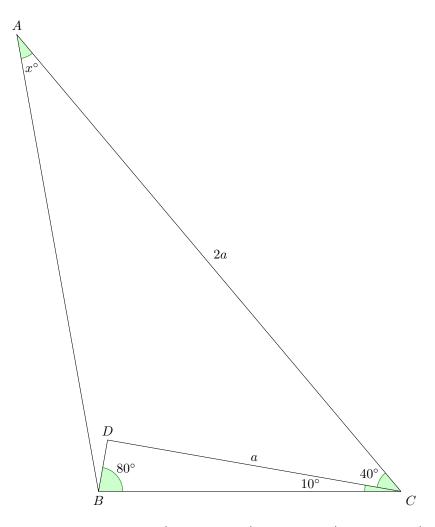

Figure 2:  $\overline{DC}=a; \overline{AC}=2a; \angle C\hat{B}D=80^\circ; \angle A\hat{C}D=40^\circ; \angle B\hat{C}D=10^\circ; \angle B\hat{A}C=?$ 

### 1.2 Solution 1

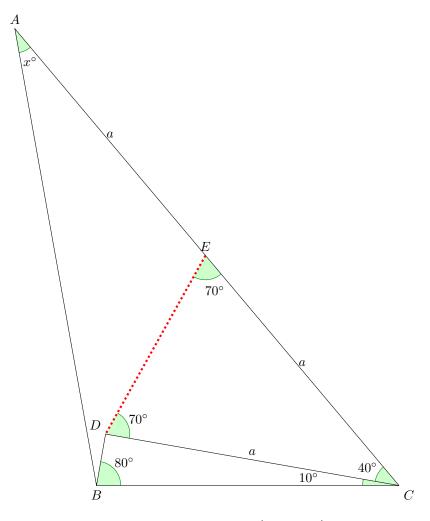

Figure 3:  $\overline{CE}=\overline{CD}=\overline{AE}=a; \angle C\hat{E}D=\angle C\hat{D}E=70^\circ$ 

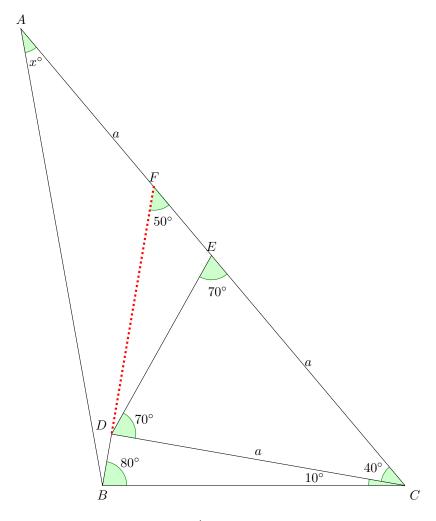

Figure 4:  $\angle D\hat{E}C = 50^{\circ}; \overline{BF} = \overline{BC}$ 

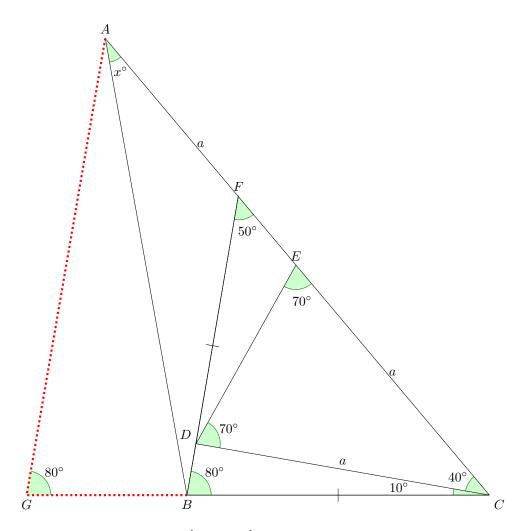

Figure 5:  $\overline{GA}//\overline{BF}$ ;  $\angle B\hat{G}A = \angle F\hat{B}C = 80^\circ; \overline{AG} = \overline{CG}; \triangle FBC \approx \triangle AGC$ 

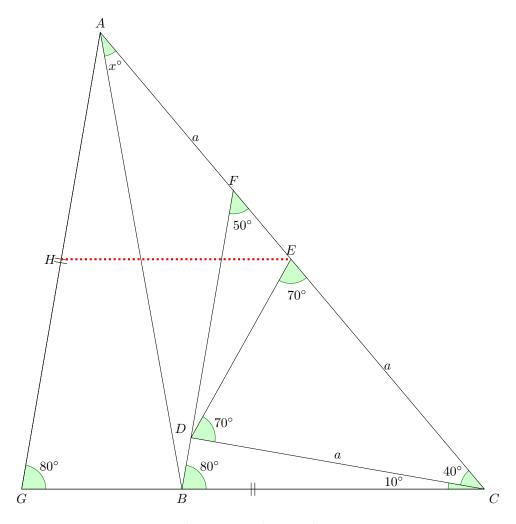

Figure 6:  $\overline{HE}//\overline{GC}$ ;  $\angle A\hat{H}E=80^\circ; H\hat{A}E=H\hat{E}A=50^\circ; \overline{GH}=\overline{HE}=\overline{HA}$ 

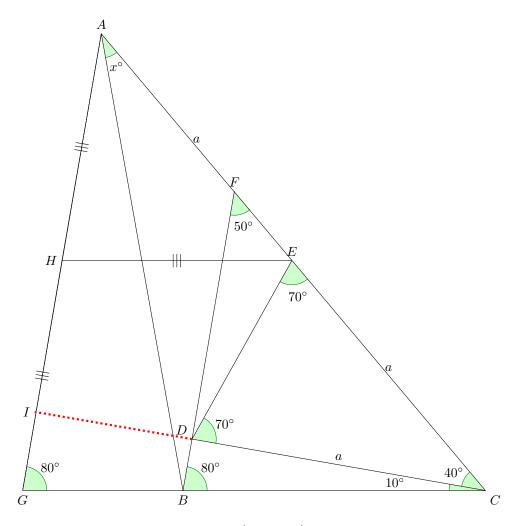

Figure 7:  $\angle G\hat{I}C = \angle B\hat{D}C = 90^{\circ}$ 

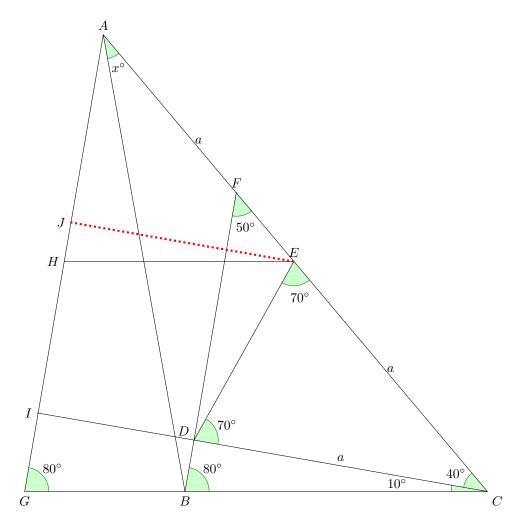

Figure 8:  $\triangle HJE \approx \triangle BDC$ 

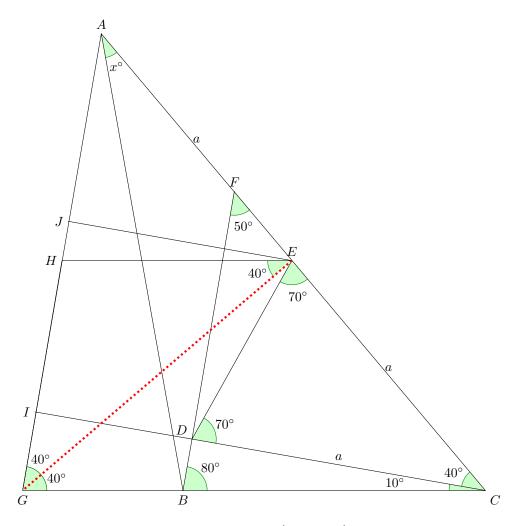

Figure 9:  $\overline{GH} = \overline{HE} : \angle H\hat{G}E = \angle H\hat{E}G = 40^{\circ}$ 

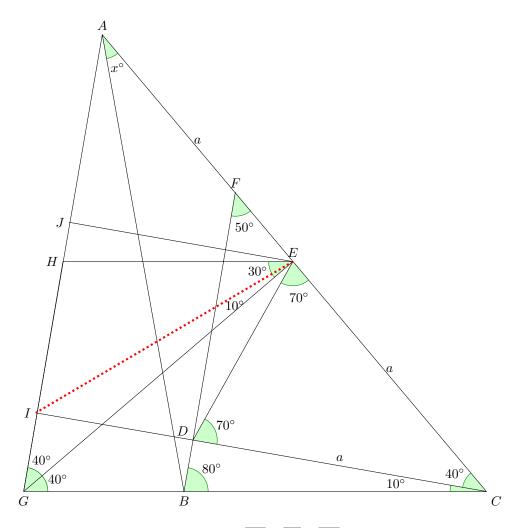

Figure 10:  $\overline{AE} = \overline{IE} = \overline{EC}$ 

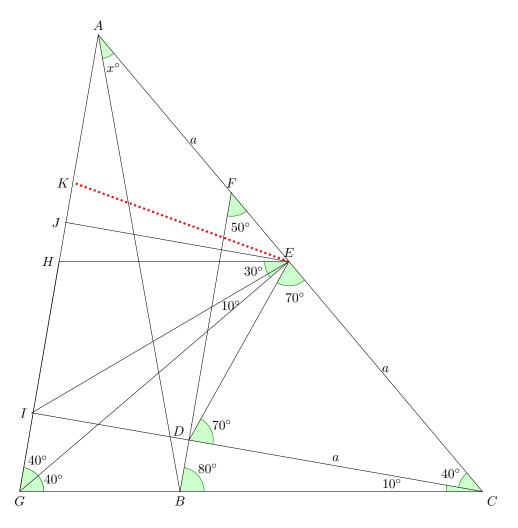

Figure 11:  $\triangle HJE \equiv \triangle KJE; \triangle KIE \approx \triangle BCF$ 

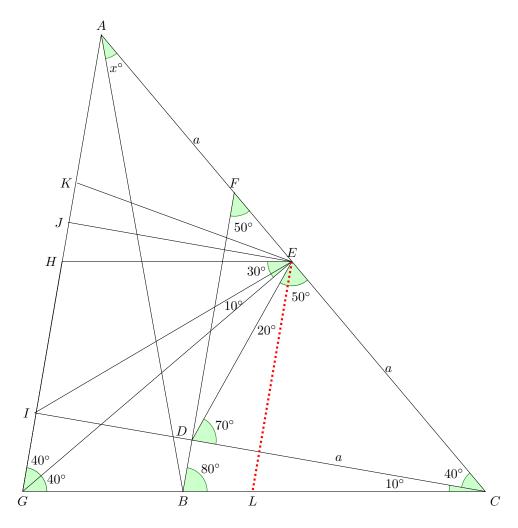

Figure 12:  $\triangle HJE \equiv \triangle KJE; \triangle KIE \approx \triangle BCF$ 

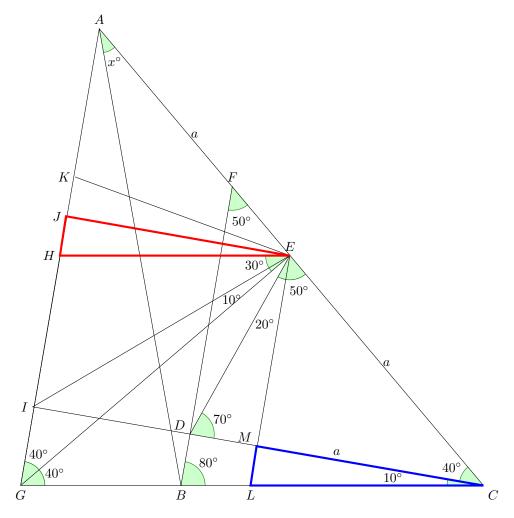

Figure 13:  $\overline{JH} = \overline{ML} = \overline{KJ} = \overline{\frac{IG}{2}}$  .:  $\overline{KH} = \overline{ML}$ 

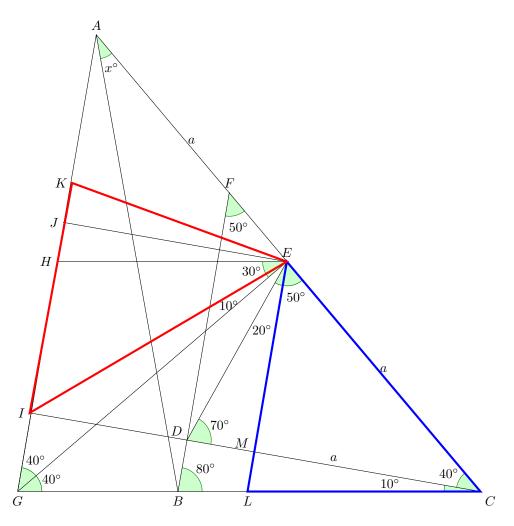

Figure 14:  $\overline{AG}//\overline{EL}$  :  $\overline{AG}=2\overline{EL};\overline{KI}=\overline{LC},\overline{KE}=\overline{LE},\angle K\hat{I}E=\angle L\hat{C}E=50^{\circ}$  :  $\triangle KIE\equiv\triangle LCE$ 

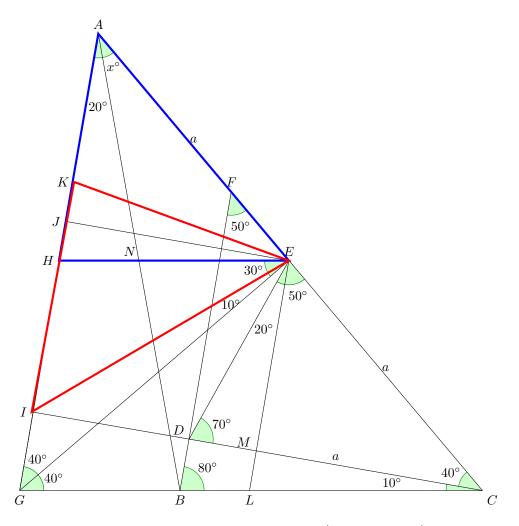

Figure 15:  $\triangle KIE \equiv \triangle HEA$   $\therefore$   $\overline{AH} = \overline{AM}$   $\therefore$   $\angle G\hat{A}B = 20^{\circ}$   $\therefore$   $\angle B\hat{A}C = 30^{\circ}$
